894 Tee Street  
Biloxi MS, 39532

Dear Mr. Trevino,

After using your invention, I was thoroughly impressed with its functionality and simplicity. I found your invention to be astounding, in that it addressed patient comfort while exceeding the current standard. I implemented it's use in our service, placing one on each of our 3 units. Having the advantage of being a small rural hospital based EMS system allowed a fair and in depth appraisal of the initiation of patient care (first contact) to the subsequent discharge and/or transfer to higher care. In our case histories to date, we have 32 trauma-related uses. We have not received one complaint against your device. In fact, every patient surveyed had lavish approbation and praise for the comfort it afforded them in the face of long term use (i.e. splinting of more than 4 to 6 hours).

All of the medical professional's involved, ER MD, radiology technician, and nurses found it to be quite useful in comforting the patient. Our EMT's reported that by it's use, they were able to decrease scene time by its simple, yet practical application. Emergency personnel, feel that with proper application the rigid cervical collar could possibly be eliminated in prehospital use, making this device an all inclusive, superior form of long spine board immobilization. The Radiology department found its translucency in films an added bonus because of its malleable form it provided ultimate comfort without compromising range of motion in obtaining clear films. After close examination by ER physicians, they stated that many patients' interviews were more fruitful due to the comfortability factor lending relaxation to a normally tense environment. Weather or not its use-prevented exacerbation's of undetermined fractures has yet to be established, but most of the healthcare professionals involved in the process had nothing but good things to say about it.

I strongly, strongly recommend your pad to anyone interested in providing the utmost comfort for his or her patients. Innovative Med.net has truly cornered the market on long splint comfort. Again, I am satisfied with its performance, decontamination, durability and above all its comfort level. We are sold on the device, and I look forward to doing business with you in the future.

Sincerely,

Stephen Singleton, EMT-P  
Director of EMS, West Feliciana Parish EMS
